Loren:

p 3: Primarily delta **agricultural** water users divert directly out of the adjacent channels.

The description should be expanded to address these main user groups:

- The State and federal water projects that export water to the Bay Area, Southern California, and the San Joaquin Valley--Intakes include: North Bay Aqueduct at Barker Slough in Solano County, Delta Pumping Plant in the South Delta, and the Tracy Pumping Plant also in the South Delta.
- Other urban water users that export water from the Delta for use in and out of the Legal Delta, including Contra Costa Water District with intake at Rock Slough.
- In-Delta small communities--that primarily use wells for water source.
- In-Delta agriculture, that uses water directly from the channels.

Include a chart showing the approximate water use for each category.

The point is--the Delta as a region uses only a portion of the water that passes through the Delta. And treated wastewater from multiple sources is released into the Delta.

I do not have, and I do not know who does have (SWRCB?) a tally of how much water the various cities around the Delta "take" from the waters of the Legal Delta.
